1. Create Dog Profile

Use Case: Create Dog Profile

Level: user-goal level

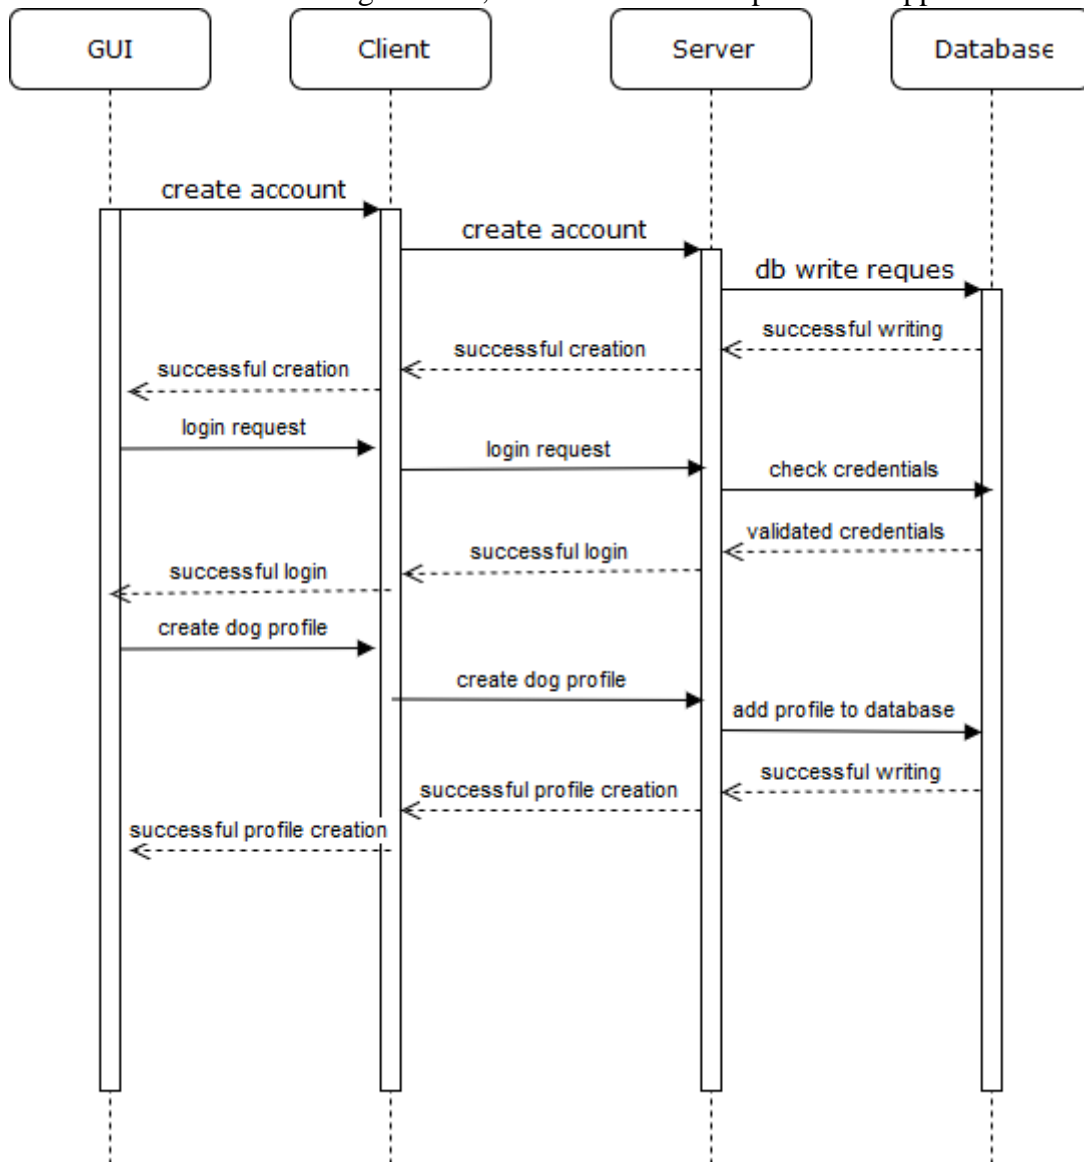

Primary Actor: dog owner

Main success scenario:

- Start application;
- Create account;
- Login to the newly created account;
- Create a new dog profile, fill it with data and save it;

Extensions:

- Failure scenarios: Incorrect login data, non-existing email when registering;
- Server offline;
- If the user has an existing account, account creation step can be skipped.

2. Register dog to a hotel

Use Case: Register Dog to a Hotel

Level: user-goal level

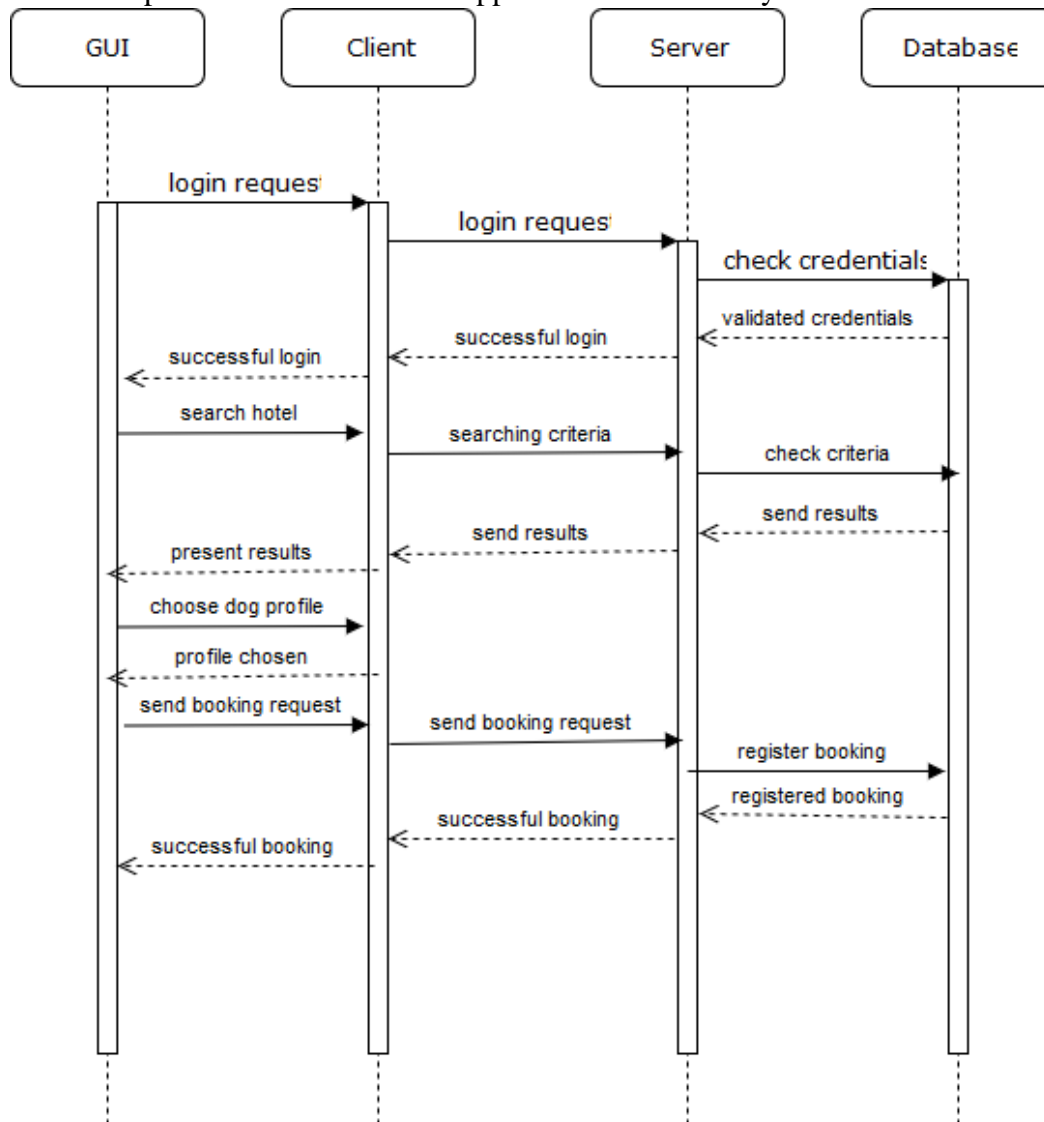

Primary Actor: dog owner

Main success scenario:

- Start Application;
- Log in to the application or create account;
- Search for a hotel, based on preferences or other criteria;
- Choose a dog profile or create one;
- Register dog and setup meeting/payment.

Extensions:

- Failure scenarios: no available room in the hotel, servers are offline, user criteria aren't met;
- Account/profile creation can be skipped if the user already has them created.

3. Retrieve dog from a hotel

Use Case: Retrieve Dog from a Hotel

Level: user-goal level

Primary Actor: dog owner

Main success scenario:

- Start application;
- Log in;
- Go to dog profile to see the dog's status and location and press "Check Out";
- Complete check-out form as well as complete payment;
- Write review;
- Retrieve dog from hotel or rely on other services.

Extensions:

- Reviews are not mandatory but are desirable for improving services;
- Unforeseeable dog-related events;
- Unforeseeable payment/retrieval related issues
- dog dies in the process; insufficient funds; not required to write review
